Know about our rechargeable lighter:

1. Product introduction:

Rechargeable electric heating tungsten wire/arc pulse lighter, color use environmental protection, clean, low-carbon electricity instead of traditional gas and fuel energy, USB interface charging, recyclable, can basically replace the scope of use of traditional lighters, arc lighters, It can generate arc sparks that are harmless to the human body. It only needs to touch the ignited object to the arc spark to ignite it. It does not produce harmful gases to the human body, no flames, safer and more environmentally friendly.

2. Product description:

It can be charged through the USB interface and can be connected to any charger with an output voltage of DC5V and an output current of 1.0A, such as a computer, a mobile phone charger, etc.; it can be fully charged in 1.5-2 hours after a single charge. The red indicator light is on when charging, and it will indicate after full charge. The light turns off automatically, and it can be used 100-300 times after being fully charged.

3. Battery:

The product uses a high-rate polymer lithium-ion battery, which is checked by a "high-precision battery performance tester" before use to ensure the safety of the battery. It has multiple protections such as overcharge, over discharge, and overload. High capacity, quotient rate.

4. Warning:

1. Do not put this product in water "f lighter feature isn't waterproof" or other liquids, otherwise it will cause a short circuit.
2. Please disconnect the power supply in time after charging (generally 2 hours for full charging), do not connect the fully charged battery to the power supply for a long time, overcharging will shorten the battery life;
3. When the battery power is about to run out, the arc spark duration is shortened. Please charge it in time at this time. If the battery is not fully discharged, it will extend the service life of the battery;
4. Do not ignite continuously for a long time, it is recommended not to exceed 10 seconds each time to extend the service life of the product.

5. Maintenance:

1. Frequently wipe it gently with a soft cotton cloth to keep the lighter's gloss.
2. After a long period of uses. The surface of the electroplated metal will lose its luster. This is a normal phenomenon. This situation is more obvious after contact with chemical substances or in a high temperature environment. It is recommended that you buy a professional "polishing tool" to wipe off dark spots.
3. Careful care should be taken to maintain the varnished surfaces with high gloss, because they are prone to scratches.
4. Because the battery uses the principle of chemical reaction, if it is not used for a long time, it is recommended to charge it once every six months to prevent the battery from over-discharging and affecting its service life.
